EDUCATION

Istanbul Technical University (MSc)
Defense Technologies
Focus: Multi-Agent Deep Reinforcement Learning

December 2020 - January 2023

Kocaeli University (BSc)
Electrical Engineering

September 2011 - June 2015

WORK EXPERIENCE

Graduate Researcher

December 2020 - Present

Istanbul Technical University, ITU Artificial Intelligence and Data Science Application and Research Center
Advisor: Assoc. Prof. Nazım Kemal Üre

- My research primarily focuses on developing **Multi-Agent Deep Reinforcement Learning** methods to tackle social dilemmas, wherein the selfish interests of agents are in conflict with the collective interests of the group. I have worked to develop **incentive mechanisms**, which modify the system's reward setup in order to ensure that the agents' self-interested policies correspond to the cooperative policy.
- Additionally, I have also worked on a **generative model (generative adversarial networks)** that adjusts the difficulty of the environment to solve **RL agent generalization problem**. This generative model creates new environments that are different from the training environment and have a similar distribution. Depending on the agent score on the generated map, the generative model gets feedback and tries to generate maps that improve the generalization of RL agents.

AI Engineer

December 2019 - December 2020

Pixselect Technology

- Worked on object detection and tracking algorithms

Electric Motor Design Engineer

November 2015 - January 2019

Femsan Electric Motors

- Designed many different type of electric motors and alternators

PUBLICATIONS

SKILLS

Programming	Python, C, C++, Matlab
Frameworks	Pytorch, JAX, Tensorflow
Communication	Turkish (native), English
